BFS ALGORITHM

```
from collections import deque

def bfs(graph, start):
    visited = []
    queue = deque([start])
    seen = {start}

    while queue:
        node = queue.popleft()
        visited.append(node)

        for neighbor in graph[node]:
            if neighbor not in seen:
                seen.add(neighbor)
                queue.append(neighbor)

    return visited

graph = {}

n = int(input("Enter number of vertices: "))

for i in range(n):
    vertex = input("Enter vertex: ")
    graph[vertex] = []

e = int(input("Enter number of edges: "))

for i in range(e):
    u, v = input("Enter edge (u v): ").split()
    graph[u].append(v)
    graph[v].append(u)

start = input("Enter starting vertex: ")

print("BFS Traversal:", " -> ".join(bfs(graph, start)))
```
